

At Redeia we have set a series of [Sustainability Objectives](#) with a 2030 horizon, which are fully aligned with the **Commitment to Sustainability 2030** and **the company's 2021-2025 Strategic Plan**, as well as with the United Nations Sustainable Development Goals (SDGs). Redeia's Commitment to Sustainability is based on [four priorities](#): decarbonisation of the economy, **responsible value chain**, contribution to the development of society and anticipating change and taking action.

Objectives associated with the **Responsible Value Chain** priority:

1. To be a driver of change for our suppliers.
2. To be a company financed with ESG criteria by 2030.

As the transition to a more sustainable economy continues, more and more elements of our business are affected by it. At Redeia, we want to lead this transition and try to be at the forefront of green investment. This means starting to incorporate concepts such as [climate change](#), [circular economy](#), safety, diversity and biodiversity into our processes.

In this global challenge, procurement management also plays a key role, which is why we not only promote new ideas that allow us to meet our needs by including innovative solutions, but we also **encourage current and new suppliers to contribute to this evolution by gradually incorporating sustainability criteria** during the supply chain management process.

At Redeia we strive to gain a deeper insight into the footprint and impact of the products and services we buy, and we encourage our suppliers to be more sustainable, so that together we can achieve our commitments.
